

DATA SHEET

Version: 1 June 2017

GERALITH Extra

Applications	Admixture for cement-bound quality screeds.
Properties	GERALITH Extra has a plasticising effect during the preparation of cement-bound screeds, thus making the work of the screed installer much easier. Strength is increased and shrinkage reduced by lowering the water/cement ratio. The quality of the mortar is enhanced when cements with a lower ratio are used.
Technical data	
Addition:	Add 0.5 litres of GERALITH Extra to 200 litres of mixing water
Application:	We recommend adding GERALITH Extra directly to a 200-litre water drum. Stir this mixing water thoroughly and use on the same day. Subsequently apply the screed as though it has no admixture.
Storage:	GERALITH freezes below -1°C . Protect from frost. If admixture has frozen, thaw at room temperature.
Delivery:	10 kg cans / 60 cans per pallet. / Can be coloured and labelled as required.

The above values are intended as a guide or have been obtained under laboratory conditions and do not constitute any guarantee of product properties. We recommend carrying out preliminary tests to check that our products are suitable for use with other products. Under our General Terms and Conditions, we guarantee consistently high product quality, but due to the many possible applications we cannot accept any liability for specific results in practical applications. This data sheet supersedes any previous versions.
